The Library is automated using “Easylib” Integrated Library Management System (ILMS)

Version: 4.4.2 and Client Server Module. The software is fully automated.

Easylib Features and Functionalities

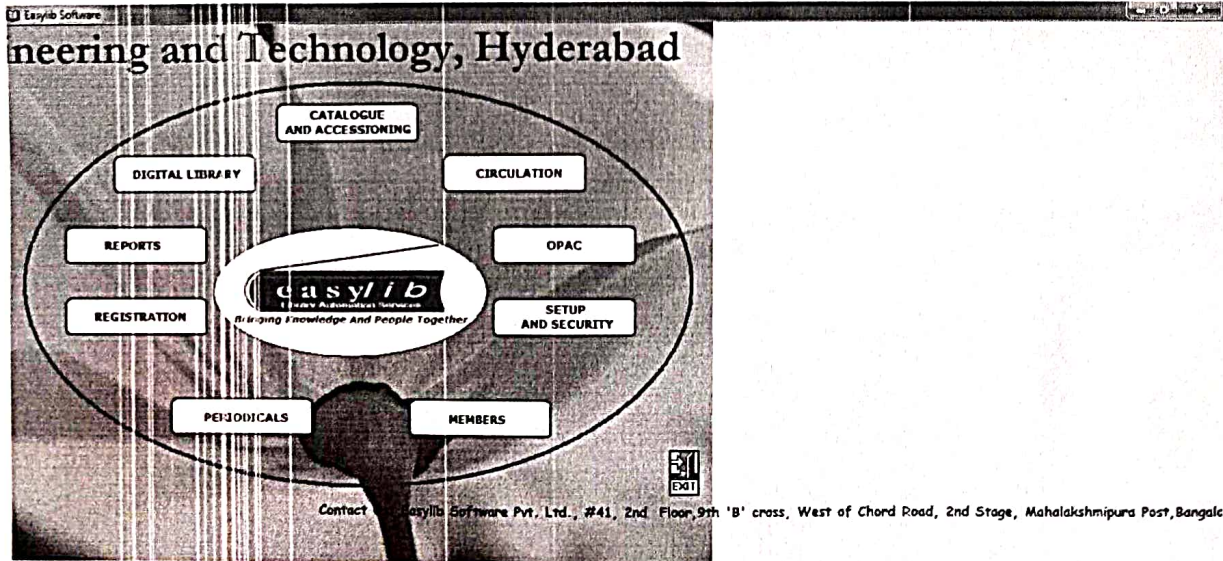

Easylib Web OPAC is interactive, fully customizable. Provides one window search. In addition, you would be able to make your own announcements, build an Explore section and connect your partner libraries, showcase accomplishments, library timings, policies etc. Easylib provides extensive features like Requisition, Acquisition, Cataloguing, Membership Management, Circulation, Periodicals and Web OPAC.

Improved Customer Service

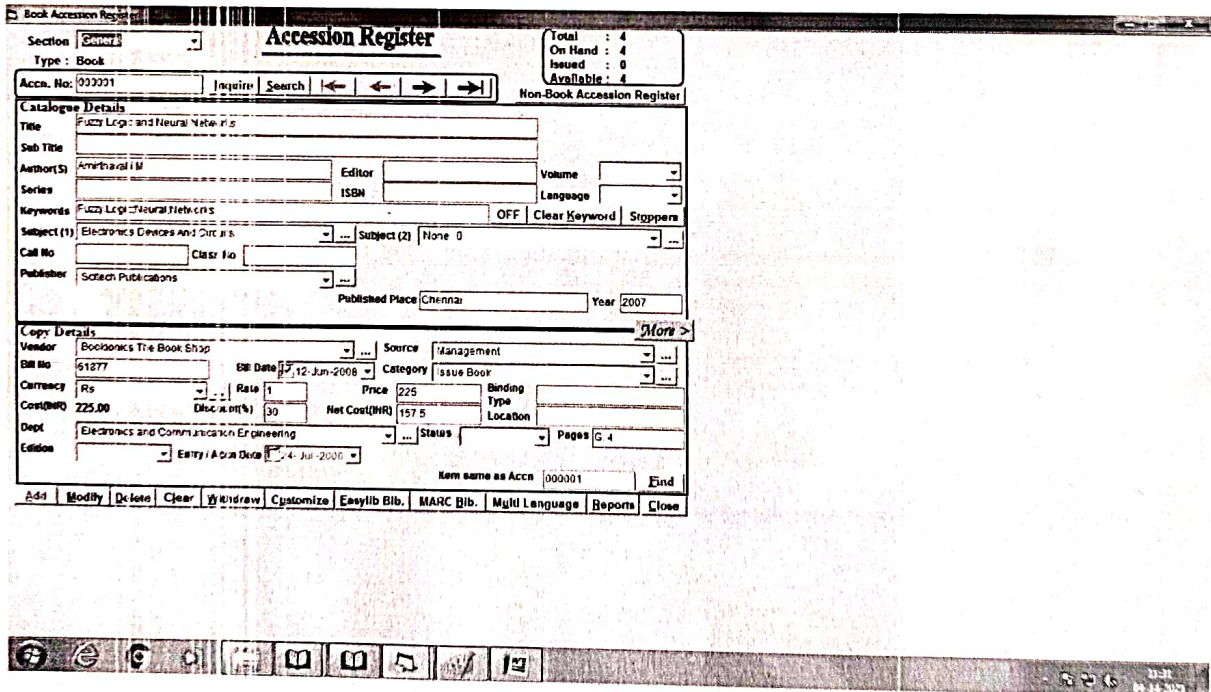

Automation of the library helps take some of the workload off of librarians and other staff members in the areas of acquisitions, cataloguing and circulation, which in turn allows them to better serve their patrons. This extra time makes the library staff available to answer reference questions which help people who have trouble in searching or finding the right information.

OPAC (Online Public Access Catalogue) Facility

OPAC is computer based and supported library catalogue designed to be accessed via terminals so that library users may directly and effectively search for and retrieve bibliographic records without the assistance of a human intermediary. OPAC usually allows searching by author name, title, and subject.
