

NAAC Format for Presentation of Best Practice 1

1. Title of the Practice	Enhancement Employability through skills development courses across various engineering streams
2. Duration (year of inception-year of discontinuation)	Year of inception:2022-23 Yes, this practice still continuing
3. Objectives of the Practice	<p>1. To Integrate skill development courses into the curriculum to Promote overall student development</p> <p>2. To equip the students with industry-relevant skills to increase their employability in competitive job markets and bridge the gap between academics and industry needs</p> <p>3. To provide Hands-on exposure through workshops, hackathons, and certifications to ensures practical competency.</p> <p>4. To provide Continuous feedback from industry stakeholders to update the curriculum from time to time</p>
4. The Context	<p>1. Integrating skill development courses into the curriculum requires addressing challenges like balancing academics, aligning with industry needs, training faculty, managing resources, engaging students, and ensuring interdisciplinary relevance.</p> <p>2. Equipping students with industry-relevant skills and bridging the gap between academics and industry needs requires addressing challenges such as ensuring curriculum relevance, providing practical exposure, training faculty, securing resources, building industry collaborations, engaging students, creating assessment mechanisms, managing time constraints, developing soft skills, and enhancing placement readiness</p> <p>3. Designing workshops, hackathons, and certification programs for practical competency involves addressing challenges like skill gaps, resource access, time management, mentorship, scalability, evaluation, engagement, post-event support, and meaningful certification.</p> <p>4. Addressing challenges in continuous industry feedback involves engaging stakeholders through advisory boards, surveys, and timely communication to ensure curriculum relevance and alignment with evolving industry needs.</p>
5. The Practice	1. Integration of skill development by offering practical courses focusing on both technical and soft skills, embedding them into core subjects, and providing opportunities for hands-on learning through workshops, industry certifications, and internships,

	<p>ensuring students gain real-world experience and competencies.</p> <p>2. Equipping students with industry-relevant skills, hands-on training, certifications, internships, and collaborations with industry experts to bridge the gap between academics and industry needs, enhancing employability in competitive job markets.</p> <p>3. Ensuring practical competency, provide hands-on exposure through workshops, hackathons, and certifications, offering real-world problem-solving opportunities, mentoring, and access to industry tools and resources.</p> <p>4. Providing continuous feedback from industry stakeholders, establish regular communication channels such as advisory boards, surveys, and collaborations, ensuring the curriculum stays updated and aligned with current industry trends and skills demands.</p>
<p>6.Evidence of Success</p>	<p>1.Integrated skill development courses</p> <ul style="list-style-type: none"> • Value-added courses, workshops, certifications, and training programs were integrated into the curriculum starting in 2021 to foster industry-relevant skills. • Foundational courses included "Programming for Problem Solving," Python Programming, AI, Java, and Data Analytics. • Specialized courses included like AI Techniques in Electrical Engineering and electives such as Cyber Security, IoT, and Deep Learning prepare students for global job opportunities. <p>2.Students are equipped with industry related skills with improved placement rates, internship success, industry feedback, and employer satisfaction, shown that the programs effectively enhanced employability and prepared students for competitive job markets.</p> <ul style="list-style-type: none"> • Improved placement rates and internship outcomes reflect the programs' effectiveness. • Positive feedback from industry stakeholders and employer satisfaction highlight alignment with job market requirements. <p>3. Provided hands-on exposure through workshops, hackathons, and certifications in Indian higher education which bridged the gap between theoretical learning and industry needs.</p> <ul style="list-style-type: none"> • Conducted Workshops like IoT and cloud-based incubation and CISCO "IDEATHON" provide practical exposure. <p>4. Continuous feedback provided from industry stakeholders and updated the curriculum, institution had established regular communication channels, such as advisory boards, surveys, and collaborations, ensuring alignment with industry trends and evolving skills requirements.</p>
<p>7.Problems Encountered and Resources Required</p>	<p>1. Integrating skill development courses into the curriculum problems such as curriculum rigidity, resource constraints, faculty resistance, limited industry collaboration, time conflicts, difficulties in scalability, and challenges in assessing competency</p>

	<p>effectively.</p> <p>2. While equipping students with industry-relevant skills, challenges include limited resources, lack of industry partnerships, faculty expertise gaps, curriculum inflexibility, time constraints for practical training, and difficulty in assessing real-world skills, which hinder effective implementation and scaling of hands-on training, internships, and industry collaborations</p> <p>3. Providing hands-on exposure through workshops, hackathons, and certifications in Indian higher education faces contests such as insufficient resources, lack of faculty training, limited industry collaboration, rigid academic schedules, and logistical difficulties in organizing large-scale events, all of which hinder effective implementation and sustainability.</p> <p>4. Providing continuous feedback from industry stakeholders and updating the curriculum encounters tasks such as difficulty in establishing regular communication, lack of industry engagement, resource constraints for maintaining advisory boards, slow institutional adaptation to feedback, and misalignment between industry needs and academic priorities, all of which can delay curriculum updates and reduce their effectiveness.</p>
<p>8. Notes (Optional)</p>	<p>The rapidly changing demands of industries have highlighted a significant gap between academic education and the practical skills required in the workforce. Employers increasingly value graduates with a blend of technical expertise and soft skills. To address these challenges, the institution introduced mandatory skill development courses, partnered with industries, and provided certifications in emerging technologies. Practical exposure is ensured through hackathons, workshops, and hands-on training sessions, preparing students for workforce challenges. These measures not only address skill gaps but also align the curriculum with real-world industry needs, ensuring students are job-ready and competitive. The initiative continues to foster employability and supports students' professional success</p>

NAAC Format for Presentation of Best Practice 2

1. Title of the Practice	Advancing Skills Through Research, Innovation, and Faculty-Student Collaboration
2. Duration (year of inception-year of discontinuation)	Year of inception: 2023-24 Yes, this practice is still continuing
3. Objectives of the Practice	<ol style="list-style-type: none"> 1. To promote a culture of innovation and research by nurturing creativity and innovative ideas. 2. To encourage research publications and patents for enhancing academic visibility and fostering industry-relevant contributions. 3. To support ideation and concept development for driving collaborative innovation and solution-oriented thinking. 4. To enhance faculty research capabilities by improving research skills and boosting academic output. 5. To organize Faculty Development Programs (FDPs) for providing ongoing professional growth in research methodologies. 6. To strengthen the research ecosystem through advanced infrastructure and strategic partnerships.
4. The Context	<ol style="list-style-type: none"> 1. Promoting a culture of innovation and research faced resistance to change among faculty and students accustomed to traditional academic practices. 2. Encouraging research publications and patents was hindered by skill gaps in academic writing and patent filing processes. 3. Supporting ideation and concept development was challenged by a lack of access to experienced mentors for guidance. 4. Enhancing faculty research capabilities required overcoming limited access to advanced training programs. 5. Organizing Faculty Development Programs (FDPs) was constrained by budgetary limitations affecting their quality and reach. 6. Strengthening the research ecosystem was limited by a lack of well-equipped research labs and facilities
5. The Practice	1. Promoting a culture of innovation and research by fostering creativity and experimentation over traditional learning drives problem-solving, critical thinking, and breakthrough innovations.

	<p>2. Encouraging research publications and patents by linking research to industry-relevant contributions boosts academic visibility, industry collaboration, and generates intellectual property.</p> <p>3. Supporting ideation and concept development through collaboration and solution-oriented thinking stimulates an entrepreneurial spirit, resulting in practical solutions and stronger industry engagement.</p> <p>4. Enhancing faculty research capabilities by ensuring faculty stay at the forefront of research and guide students in cutting-edge fields elevates research quality, faculty-led projects, and impactful teaching.</p> <p>5. Organizing Faculty Development Programs (FDPs) for continuous professional growth and keeping up with modern methodologies enhances faculty skills, promotes global research standards, and improves education quality.</p> <p>6. Strengthening the research ecosystem through strategic partnerships and advanced infrastructure expands research output, attracts industry funding, and establishes the institution as a prominent research hub.</p>
<p>6. Evidence of Success</p>	<p>1. Increased student participation in innovation projects and recognition in national/international contests. Indicates growth in creative thinking and problem-solving skills.</p> <p>2. Growth in publications and patent filings. Indicates enhanced academic reputation and valuable industry contributions.</p> <p>3. Success in collaborative innovation programs and market-ready solutions. Indicates a stronger entrepreneurial culture and real-world relevance.</p> <p>4. More faculty-led projects and increased publications. Indicates improved research quality and faculty expertise.</p> <p>5. Higher FDP participation and positive faculty feedback. Indicates enhanced research skills and improved teaching quality.</p> <p>6. Development of research labs, industry collaborations, and increased funding. Indicates a growing, productive research environment attracting industry support.</p>
<p>7. Problems Encountered and Resources Required Please identify the problems encountered and resources required to implement the practice (in about 150 words).</p>	<p>1. For student participation in innovation projects and recognition in national/international contests: Lack of motivation, limited resources, and high competition. Resources: Funding, mentorship, and infrastructure for prototyping.</p> <p>2. For publications and patent filings by faculty and students: Limited experience in academic writing, patent filing, and time constraints. Resources: Training programs, databases, and IP consultants.</p> <p>3. For collaborative innovation programs and market-ready solutions: Difficulty in fostering collaboration with industry and lack of real-world scenarios. Resources: Industry partnerships, real-world problems, and collaboration tools.</p>

	<p>4. For faculty-led projects and publications: Limited time for research, lack of funding, and insufficient research training. Resources: Grants, time allocation, and research databases.</p> <p>5. For Faculty Development Programs (FDPs): Budget constraints, scheduling conflicts, and low awareness of faculty development. Resources: Funding, expert trainers, and time slots for FDPs.</p> <p>6. For strengthening the research ecosystem: Limited research infrastructure, difficulty in industry partnerships, and securing funding. Resources: Lab infrastructure, industry relationships, and grant writing support.</p>
<p>8. Notes (Optional)</p>	<p>To adopt and implement this best practice in other institutions, several key factors need to be considered. First, strong institutional support is crucial for providing the necessary resources, both human and financial, to drive research initiatives. Faculty engagement is important, and involving faculty in decision-making and offering continuous training in research methodologies, grants, and intellectual property management can enhance their capabilities. Establishing collaborations and partnerships with industries and external research bodies can expand the scope and relevance of research. Streamlining processes to overcome bureaucratic hurdles and aligning academic goals with industry needs is essential. A system for recognizing and rewarding research achievements motivates faculty and students to contribute actively to innovative research. Investing in state-of-the-art research infrastructure and digital tools ensures high-quality research outcomes. Finally, engaging students in research through internships and workshops bridges the gap between academic knowledge and industry requirements, preparing them for future careers.</p>
