Brailey software

Brailey – blaster is an open source software used for providing the assistance for visually impaired, which is installed in the computers at Computer Lab.

Braille - Blaster is a free and open-source software program designed specifically for people who read and write in Braille. It offers a wide range of features to help users:

1. **Transcribe text:** Convert printed text into Braille format for reading on a Braille display.

2. **Create Braille documents:** Write and edit documents directly in Braille.

3. **Learn Braille:** Practice reading and writing Braille with built-in tutorials and exercises.

4. **Translate languages:** Translate text between multiple languages, including Braille languages.

5. **Access information:** Read eBooks, listen to audio books, and browse the web in Braille.
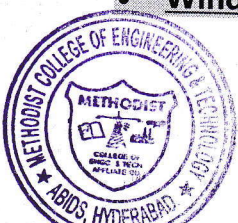

Key Features:

1. Supports various Braille displays and input methods.
2. Offers multiple Braille translation tables.
3. Includes math symbols and music notation support.
4. Provides tools for formatting and editing Braille documents.
5. Available for Windows, Mac OS, and Linux.

The software version details are given below link

https://www.brailleblaster.org/download.php

- **Windows:** *BrailleBlaster 2.0.42-stable Installer*
