## Internal Examinations Grievance Redressal Mechanism

An effective mechanism exists for redressal of grievances with reference to the evaluation. There is a possibility of that grievances may arise in question paper setting and/or evaluation of answer scripts.

The grievances related to out of syllabus questions or lengthy question papers with insufficient exam time or inappropriate evaluation, are brought to the notice of the concerned subject faculty by the students. If the grievance does not get resolved there, the student can approach the Head of the Department (HOD) for a suitable resolution. Keeping the Principal informed, the HOD is vested with the power to reconduct the examination, if necessary. The marks are displayed on the notice board at the end of each internal exam and also the consolidated marks of the CIE being submitted to the university is also displayed to the students.

All grievances are resolved before the CIE marks are submitted to the university. If the grievance still does not get resolved with the HOD the student can approach the Principal. As for SEE, based on the university guidelines and time frame prescribed, students can apply for either recounting and/or reevaluation by paying the prescribed fee.

To

Mr. Imran Sir,

Dept of Civil Engg

MCEI

Sub:- Request for recounting of Surveying Interned-I paper.

Dear Sir,

I am M. Vaishnavi (160722732309) from III Sem of our department. In my interned-I of Surveying exam, I attempted all the long answer questions. Out of 4 questions, in 3 questions I secured 5/5 marks and in one question I got 4 marks which can be counted as choice question. But in total, that 4 marks is counted. So, I request you re-consider and recount my paper and allot that 1 mark extra. Kindly do the needful.

Yours faithfully,

M. Vaishnavi.

Will re-count and allot  
the mark if found ok.

  
(Imran) 24/11/23.

### PART-B

Cache Memory Mapping: It is most required application in the computer memory.

- Cache memory stores the data of frequently used data in main memory/CPU.
- For every data stored in the cache memory there is a duplicate data in the main memory.
- Cache memory reduces the average time access of a memory from rather than main memory
- It is the fastest and flexible memory access.
